Create your spending plan

## Map your monthly expenses and set your targets

Start by listing your current monthly expenses based on an average over six months to one year. Use bank and credit card statements (get automated spending reports if you can) to make it easier. List "essential" and "discretionary" (extra) expenses separately where you can. For expenses that are less often than monthly, add up or estimate spending over one year and divide by 12 months to get a monthly estimate. Then review and shift spending to fill in your target spending goals. Use the income and cash flow worksheet on page 4 to track how much you can spend. Enter amounts to the nearest dollar. The totals are automatically calculated for you on page 3.

## Check your cash flow Income and cash flow worksheet

With your spending filled in, now you can see how you're doing compared to your income.
In the first column, fill in your income per month to determine your gross monthly income. Then see:

1) If you have a gap between your income and expenses, and
2) How much you're spending on housing, savings and debt as a percentage of your gross income.

In the second column, fill in your current income (if not changing) or target income (if you need to add or reduce income) to see how your current cash flow compares to your target cash flow.

All items shaded in blue are calculated automatically and cannot be filled in manually.
