

# Meet/Beat – Actively Managed

## Strategy Summary | Third Quarter 2018

### Investment Strategy

Meet/Beat –  
Actively Managed

### Preference Overlay

None

### Strategy summary

Meet/Beat – Actively Managed Strategies are designed to offer a diversified allocation that captures meaningful equity market participation while seeking to select managers who will outperform their underlying benchmarks over a full market cycle. These strategies have higher equity allocations than Downside Risk Mitigated Strategies targeting similar client risk profiles.

Within these strategies the research team utilizes what they call “Falling Market Managers” for the more conservative risk profiles while “Rising Market Managers” represent a greater proportion of the most aggressive risk profiles. Falling Market Managers have the opportunity to outperform during periods of market decline because of their eye toward mitigating investment risk. Rising Market Managers are expected to perform better in rising markets as they are typically positioned to maximize a rising market environment.

The information shown below is for the selected base models of the referenced strategies. A client’s tolerance for risk, investment time frame and investment preferences, among other factors, will ultimately determine the most appropriate strategy for each particular client.

### Strategy composition

#### Conservative Long-Term

- 30% Equity
- 68% Fixed Income
- 2% Cash/Money Market

Asset Allocation	Asset Class	Investment	Strategy Weight (%)
	Large Cap Growth Stocks	Jensen Quality Growth	4.00%
	Large Cap Growth Stocks	ClearBridge Large Cap Growth	4.00%
	Large Cap Value Stocks	American Century Value	4.50%
	Large Cap Value Stocks	TCW Relative Value Large Cap	4.50%
	Mid Cap Value Stocks	Wells Fargo Special Mid Cap Value	5.00%
	International Stocks	Janus Henderson International	2.50%
	International Stocks	Harding Loevner International Equity	2.50%

The performance numbers presented are annualized average total returns. Please refer to the following pages for important disclosure information.

The performance data quoted represent past performance, and are no guarantee of future results. Returns and the principal value of an investment will fluctuate so that the accumulation units or shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above.

You cannot invest directly in any index. Unlike mutual funds, index returns do not reflect a deduction for fees or expenses.

The performance data quoted represent past performance and are no guarantee of future results. The performance is as of September 30, 2018.

Prior to June 30, 2016, the strategy performance was represented by a synthetic blend of strategy holdings based on the strategic asset allocation of the base model. The performance of the underlying holdings of the strategy was provided by Morningstar, Inc. The impact of an individual fund on overall performance was measured by the fund's performance multiplied by its weight in that strategy. The synthetic blend also represented quarterly rebalancing. In June 2016, the firm implemented the use of actual client account performance to present the strategy performance. The use of client performance has been applied retroactively since inception.

<sup>1</sup> The performance presented is a composite of all fee-paying fully discretionary accounts under management by TIAA, FSB, as of December 31, 2017, that are managed in the composite's stated style. Composites are reported quarterly when the minimum of five accounts is met. The composite includes accounts invested in the stated strategy for at least one full month with a minimum market value of \$45,000 from inception through December 31, 2017. Effective as of January 1, 2018, the composite includes accounts invested in the stated strategy for at least one full month with a minimum market value of \$20,000. Accounts with significant cash flows and/or cash balances are excluded from the composite. The Gross of Fee performance presented reflects the reinvestment of dividends and other earnings but does not reflect the deduction of investment advisory fees and other expenses. Net of Fees performance is calculated net of management fees, transaction costs, and custodial fees. Net of fee returns for the period reflect the actual management fee paid from the accounts in the composite; however in cases where a management fee was not deducted from the account or the account paid the fee for other household accounts, the maximum annual fee of 1.15% was applied. Please see the accompanying fee schedule for specific fee information. Investments and allocations may have changed since the date of this report. Clients will receive trade confirms for trades done on their behalf within the account. Please note: Clients have the option to suppress confirms, at which point clients will need to refer to their monthly custodial statement. Individual client performance may differ from the composite returns based on many factors including, but not limited to, their inception in the program, timing of additional investments, individual preferences, fees, risk, return and time horizon. Since the composite may include accounts of varying types, the fee schedules vary depending on the nature and size of the account as well as the investment vehicle.

<sup>2</sup> Index performance information has been obtained from third parties deemed to be reliable. Indices are shown for convenience purposes only. The definitions of the broad market indexes are as follows:

Russell 3000 – The Russell 3000 is market capitalization weighted index of the largest 3,000 U.S. publicly traded companies. The companies tracked by this index account for about 98% of companies traded in the United States.

MSCI All-Country World ex-US – The MSCI All-Country World ex-US is a free-float adjusted market capitalization index designed to measure the equity market performance of developed markets and emerging markets, excluding the U.S. It includes securities from 44 countries comprising 23 developed and 31 emerging market countries.

Bloomberg Barclays Capital – The Bloomberg Barclays Capital Aggregate Bond Index is a broad-based index often used to represent investment grade bonds being traded in the United States.

<sup>3</sup> Standard deviation of return measures the average deviations of a return series from its mean, and is often used as a measure of risk. A large standard deviation implies that there have been large swings in the return series of the manager or index.

The portfolio is subject to the risks associated with the types of securities held by each of the underlying investments in which they invest. An investment in an asset allocated portfolio may be subject to all or some of the following investment risks, depending upon its underlying investments:

**Equity Investment Risks:** Market Risk – the risk that the price of securities may fall in response to economic conditions; **Company Risk** – the risk that the financial condition of a company may deteriorate, causing a decline in the value of the securities it issues; **Style Risk** – the risk that an investment style may lose favor in the marketplace; **Large-Cap Risk** – the risk that large companies may grow more slowly than the overall market; **Small-Cap/Mid-Cap Risk** – the risk that smaller company securities may be more volatile than those of larger ones; **Real Estate Risk** – investing is subject to various risks, including fluctuations in property values, higher expenses or lower income than expected, and potential environmental problems and liability; **Foreign Investment Risk** – the risk that securities of foreign issuers may lose value because of erratic market conditions, economic and political instability or fluctuations in currency exchange rates, which may be magnified in emerging markets.

**Fixed-Income Investment Risks:** Interest Rate Risk – the risk that the market value of fixed-income securities may fluctuate when interest rates change; **Prepayment Risk** – the risk that the issuers of individual securities may prepay them at a time when interest rates have declined; **Extension Risk** – the risk that the value of individual securities will decline because principal payments are not made as early as possible; **Income Volatility Risk** – the risk that the income from a portfolio of securities may decline in certain interest rate environments; **Credit Risk** – the risk that the issuers of individual securities may default; **Risks of Inflation-Indexed Bonds** – the risks that interest payments on inflation-indexed bonds may decline because of a change in inflation (or deflation) expectations; **Illiquid Securities Risk** – the risk that illiquid securities may be difficult to sell at their fair market value; **Active Management Risk** – the risk that a fund may underperform because of the allocation decisions or individual security selections of its portfolio manager; **Index Risk** – the risk that a portfolio's performance may not match that of its benchmark index; in addition, the portfolio is subject to **Asset Allocation Risk** – whereby the portfolio is impacted by the decisions made regarding the weightings among the different allocations.

Meet/Beat – Actively Managed	Number of Portfolios	Dispersion %	Total Composite Assets
Conservative Long-Term	11	0.243	\$3,403,653
Moderate Long-Term	122	0.175	\$44,635,512
Aggressive Long-Term	91	0.159	\$30,684,497

Mutual funds and exchange-traded funds (ETF's) incur embedded expenses (known as their "expense ratio").

All managed accounts are subject to market risk. Consult with your Advisor to ensure that you are comfortable with the level of risk in your portfolio, and advise them of any changes in your financial situation.

Portfolio Advisor is a fee-based investment advisory managed account service offered through Advice & Planning Services, a division of TIAA-CREF Individual & Institutional Services, LLC, a registered investment adviser.
