How to customize privacy settings on your device and other popular services

Help your child stay secure in cyberspace

It is important to have an open dialogue with your children on how they interact online. Knowing which games they play and how they are involved on social media can help you protect them.

- Enable parental controls for device and individual apps.
- Discuss what personal information not to discuss with online “friends.”
- Monitor phone usage, including implementing limits on app purchases.
- Check for geolocation settings: A GPS-enabled smartphone can reveal your child’s location through online posts and uploaded photos.
- Read *Terms & Conditions* that give away Personally Identifiable Information (PII).
- Secure privacy of photos/locations of kids on parental Facebook pages.
- Search your kids’ images on Google to see if they’ve been replicated on other sites or otherwise used without your permission.
- Keep devices out of the bedroom at night by having charging stations in family room.

What to do if your child is victimized

Make it clear that the victimization is not their fault.

Contact your local law-enforcement agency.

Save all evidence of victimization such as emails or instant message conversations.

Make a report to the CyberTipline® at www.cybertipline.com or 1-800-THE-LOST® and include all information available.
